

OAKLANDS CROSSING GRADE SEPARATION

NIGHT WORKS AND TRAFFIC RESTRICTIONS NOTIFICATION

DECEMBER 2018

Throughout December, night works will continue on the Oaklands Crossing Grade Separation project. This includes underground traffic signal and road lighting conduit installations, SA Water asset investigations, removal of old stobie poles and station works. The project will also continue building the eastern side of the new Morphett Road bridge. Works will take place within the rail corridor, on Dunrobin, Morphett and Diagonal Roads and Murray and Crozier Terraces.

A reminder to motorists that speed and lane restrictions will continue to be in place with traffic management located on site to advise commuters of changed traffic conditions. Further information on traffic management is below.

Key Activities

Night works will continue **throughout December, between the hours of 7pm and 6am**. Respite nights will be provided throughout these works where possible. **Please note that there will also be ongoing works during the day and construction crews will be utilising stockpile locations within the various project zones during the day and night. A temporary fenced compound will be set up next the rail corridor on Murray Terrace, near Barry Road.**

Key activities throughout the works include:

- Set up of heavy machinery, traffic management and temporary lighting
- Saw cutting and trenching of road surfaces to lay traffic signal and road lighting conduits, for the new intersection at Diagonal and Dunrobin roads
- Underground power connections and stobie pole removals
- SA Water asset investigation works
- Concrete and steel works for the bridge
- Station formation works
- Earthworks in the rail corridor
- Truck movement to transport materials and spoil to stockpile areas
- Backfill, compaction and reinstatement of trenches.

How will these works affect me?

The construction crew will make every effort to minimise noise and lighting impacts to nearby residents and businesses as much as possible. As there will also be ongoing day works in these areas, where possible, the construction crew will aim to complete the most disruptive works during the day and early evening.

For all works, speed and lane restrictions and closures will continue to be in place on main and local roads, with traffic management located on site to advise commuters of changed traffic conditions. Road users and pedestrians are advised to please take care and observe traffic signage when travelling through the area. Traffic controllers will be on site to assist. The project works closely with the Traffic Management Centre and where possible, works that may cause further traffic delays will be undertaken outside peak hours and during weekends.
